

ROLL-UP DOOR GUARD

The **ROLL-UP DOOR GUARD** is a unique patented collision prevention system designed for overhead doors. The **ROLL-UP DOOR GUARD** prevents costly repairs or expensive door replacement by using a guard arm that physically remains in front of the driver's view. Once the door is completely open the guard arm automatically rises out of the way to allow normal usage of the doorway. The **ROLL-UP DOOR GUARD** requires no electricity to operate and installs easily in less than an hour.

THE ROLL-UP DOOR GUARD

- **Prevents vehicles from driving through an overhead door before it is fully opened.**
- **Is a physical and visual barrier.**
- **Patented door actuation, no electricity required.**
- **Can be installed on both manual and automatic doors.**
